

Majorfax Newsletter – Sep 2018

How did Majorfax manufacture Aluminium Bronze castings to enable these classic cars to run smoothly?

Majorfax has been manufacturing castings for high-end vintage cars for several years. Brineton Engineering recently came to Majorfax to cast a number of parts to operate within the gearboxes of classic cars worth several hundreds of thousands of pounds.

These castings were essential for the restoration of vintage racing cars

When AWS Engineering Ltd, a Warwickshire-based historic racing company, needed aluminium castings as part of their project to restore racing cars, Majorfax stepped in to offer their expertise.

We have been supplying this sector for over 30 years...

Due to a number of long-term contracts with several global manufacturers, this sector has been Majorfax's most significant growth area in the 2017-2018 Financial Year.

Quality Visit to China

Gary Cox (Quality Director) and Jingwen Zhao Burnard (Supplier Development Co-ordinator) travelled to China for two weeks in September in order to maintain healthy relations with some of our Chinese business partners and foundries abroad.

Whilst in China, Gary and Jingwen have been working on expanding Majorfax's supply chain and production capabilities whilst carrying out several audits. They also managed to find time to enjoy some of China's finest dishes.

Is Majorfax on track?

Majorfax has been manufacturing and supplying castings to the Railway sector for over 30 years and in the last 12 months the organisation has seen a 64% increase in orders.

This growth has come alongside a commitment from the government of £88bn towards domestic rail infrastructure, including HS2 and the London Underground, in what is the greatest investment in over a century according to the UK Rail Supply Group (RSG).
